WING OVER

Brand Guidelines

FEBRUARY 2025

WELCOME!

THIS BOOK IS A TOOL TO HELP ARTICULATE
THE **WING OVER** BRAND CONSISTENTLY
AND MAKE IT STAND OUT

© ChromaStudio

Introduction

The brand identity manual provides the rules applying to the visual identity system. It is the grammar which applies to the logo / typeface / colours and structure of the space.
However, those rules should not stop further improvements, well considered changes and creative experimentation.

It is important to consider that certain elements of the brand identity will be ‘learned’ by the consumer over time and more strongly identified with the brand than others.
Those elements should never be changed while other details can be reassessed over time in relation to their visual success and functionality.

The brand identity manual is exclusively published in PDF format and provided on CD.
The CD contains the manual itself, as well as all logos and logo variations listed in the appendix.
You may print the brand identity manual on your office colour printer, but be aware that colours generated by desktop equipment cannot be used as a valid guide.

You should always use the colour references indicated in the manual and a Pantone Colour Formula Guide to check colours for accuracy

The brand identity manual establishes rules covering a large part of the production. On the other hand, it recommends but does not impose the use of specific equipment (signage, collateral material, etc.) In many cases the manual shows different options or imaginary situations whose aim is to help and inspire you in the creation of the relevant material.

As the brand identity manual can not cover all possible cases exhaustively, it is important that all new designs, especially if they costly to produce, are submitted for approval to Mind Design (contact details are listed in the appendix). All existing designs can be obtained from Mind Design by request.

Please note:
This brand identity manual will be completed and amended on a regular basis. Therefore, whenever you start producing material, please check that you are in possession of the latest version. This version was released in 2025

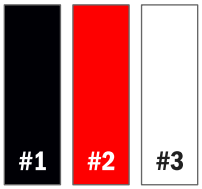
Core elements

The core elements make the WING OVER brand instantly recognisable. They create the basis for the visual identity .

- Our logotype
- Our colour palette
- Our typefaces

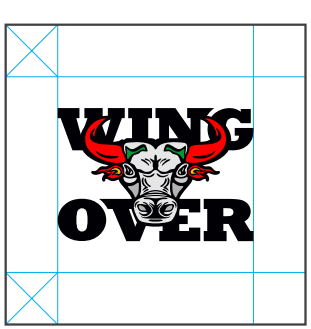


Colour palette

© ChromaStudio

Logo free zone

The space around the logotype is equally important as the logotype itself. Whenever words or designs appear near the logotype, a free zone should be considered around it. Nothing can be put here, neither texts nor drawings or photographs. Keeping an amount of space around the logo not only enhances its appearance, the free zone also helps to position the logo correctly on a format.
The free zone can be larger than illustrated, or the unit space shown can be added on repeatedly but it should never be smaller.

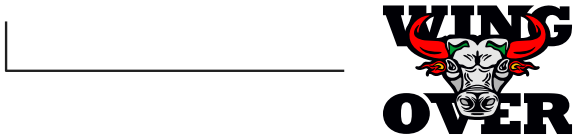


Logo position

The logotype should always be positioned in the centre of a design or format; it should be horizontally as well as vertically centered.
However by applying this rule the freezone must be priority to consider. If the space is too tight, the logotype with strapline can be the center point.

Logo Minimum Size

To maintain the legibility of our logo, make sure that it is never less than 2.5 cm wide in English



© ChromaStudio

Logo in a frame

The logo can be used in the Square or circle frame shapes only if the format itself is in that particular shape (sticker, tag, sign, etc).
The position of the logotype should be centered and free zone must be considered.

PROTRUDING LOGO

For the protruding logo, another option is to use white plastic as the only material. In such a case, either the whole letter is cast from a mold or all sides of each letter are cast separately and then assembled. Make sure that the sides are assembled in a way that no light shines through at the seams

-

For the sides, use any metal that is suitable for BLACK colour
